Henrique Hallmann

Technical Leader Senior Full Stack Software Developer

With fourteen years of experience across a diverse range of technologies and application web servers, I bring a strong background in computer science to the table. Recently, my focus has shifted towards a single product frontend utilizing JavaScript, React, and HTML. I thrive on new challenges and have successfully led a team of four developers, specializing in frontend development.

EXPERIENCE

Atlas — Software Develop/ React

NOV 2022 – current

Working in the development sector, I closely collaborate with businesses to create custom software solutions and deliver the best user experience. This company supports organizational growth and globalization by building compliant remote teams anywhere in the world. My experience here revolves around a single product used by thousands of clients. I have successfully implemented new features, enhanced application performance, led and guided other developers in our architecture, and reviewed their code.

Additionally, I provided a solution to develop a new style guide for our company, created a system for custom roles and permissions across the platform, and implemented customizations around Azure API Management. This customization provided a point of entry for external developers to access our APIs, further enhancing our platform's capabilities.

stack: Azure *Cloud, React, C#*

ae.studio — Software Develop/ Node.js

MAR 2020 – NOV 2022

Working in the development sector, I closely collaborate with executives to create custom software solutions. This startup has a bright future ahead, solving founders' problems and developing their innovative ideas. During this time, I worked with various clients, with one standout being Vessel, a startup with great potential. At Vessel, I ensured the service remained operational while developing new features, utilizing AWS, mobile technologies, and REST endpoints. At SmartSuite, I contributed to developing a new application from the ground up, creating a no-code Work OS application. This experience allowed me to leverage my skills in building robust and scalable solutions from scratch.

stack: *Postgres, Docker, AWS, React, Node.js, python*

KNOWLEDGE

Extensive experience in Node.js, Javascript, Typescript

Senior-level expertise in React, Next.js and Express.js

Strong experience with microservices and cloud applications with AWS, Azure

Long-term experience with databases such as MongoDB, MSSQL, Oracle, Postgres

Excel in front-end development and user experience

ACHIEVEMENTS

High performance

Achieved by splitting a monolithic application into multiple microservices, utilizing new broker technologies and message queues.

Technical leadership

Earned through hard work, helping the team reach goals, and significantly influencing the establishment of best practices.

Client Excellence

Provided a key contact point and led the way in setting the best solutions for the system, enabling client success.

Open track — Software Develop/ Node.js

OCTOBER 2019 - MAR 2020

Working to develop logistics solutions, this startup has a bright future ahead, focusing on solving problems in the marine sector, particularly container tracking. This role has provided me with strong knowledge in Server-Side Rendering, AWS SNS, and website scrapers.

stack: *Postgres, Docker, AWS, React, SSR Express*

Topazio Bank — Software Develop/ Node.js

Feb 2019 - OCTOBER 2019

Working to develop the next generation of financial solutions for the public, this fintech is growing rapidly, and the challenges are becoming more complex. Known for its Bank as a Service (BaaS) model, I am focused on seamlessly integrating as many service providers as needed into one comprehensive process to complete financial services efficiently and effectively.

stack: MongoDB, Docker, RabbitMQ, React, Express

AGCO/e-core — Tech Leader/ Node.js

MARCH 2016 - MARCH 2019

Leading a team responsible for developing the next generation of apps aimed at the future of farming. This application handles data from hundreds of devices, sending thousands of data points daily. I design the application to present this information to end users effectively. In this role, I work with the following technologies: MongoDB, Docker, RabbitMQ, React, Angular, Heroku, Amazon S3, Express, Hapi, and Redux.

TCS, Bangalore/India — Software Developer/js

JANUARY 2015 - DECEMBER 2015

At TCS (Tata Consultancy Services), I worked with a reinsurance company, SwissRe, to identify optimization opportunities for a new application being developed for modern browsers. My responsibilities included coding new functionalities, resolving bugs and issues, and promoting cultural changes between the client and TCS.

Education

Universidade Federal do Rio Grande do Sul

Bachelor's degree in computer science

JANUARY 2004 - DECEMBER 2012

Language

Portuguese and English

HP, Brazil— Software Developer/java

MARCH 2012 - DECEMBER 2014

As a developer on the Capacity Advisor team at HP, I contributed to providing software solutions for large data centers. My responsibilities included coding new functionalities, resolving bugs, and ensuring the product remained stable.
